

Chibougamau Independent Drilling Intersects Wide Core Length of Copper-Silver Mineralization

September 09, 2013 Rouyn-Noranda, Quebec, Canada. *CHIBOUGAMAU INDEPENDENT MINES INC.* (CBG-TSX-V, CLL-Stuttgart) and *GLOBEX MINING ENTERPRISES INC.* (GMX – Toronto Stock Exchange, G1M – Frankfurt, Stuttgart, Berlin, Munich, Xetra Stock Exchanges and GLBXF – International OTCQX) are pleased to inform shareholders of the results of the first drill hole, BJ-13-09, undertaken to test a mineralized geological target in an area of historical drilling.

Hole BJ-13-09 has an azimuth of 124°, a dip of 45° and a length of 189 metres and was drilled in order to sample and try to define the controlling structure of historical mineralization in the area. Previous historical drilling was done in several directions as, in the Chibougamau Mining Camp, there are several prominent directions of ore emplacement. The first holes of the program tested one of the historical strike directions of mineralization on the property. **Hole BJ-13-09 intersected 36.5 m (119.7 ft) of mineralization grading 1.58% Cu and 11.1 g/t Ag** at shallow depth as indicated below:

The mineralized zone was also anomalous in gold.

Chibougamau Independent Mines core sampling and quality assurance/quality control procedures and assay methods are available on Chibougamau Independent Mines' website at www.chibougamaumines.com under Technical, Technical Information.

Mineralization consists of semi-massive to stringer sulphides with varying amount of chalcopryite and pyrite in a carbonate schist from core length 22 m to 46.45 m and chalcopryite and pyrrhotite in a brecciated, mineralized anorthosite from 46.45 m to 58.50 m. Other narrow zones of up to 1.71% Cu were also intersected.

Drill hole BJ-13-09 is the first in a series of six drill holes. **At this point in time, we are unable to define a true width or strike to the mineralized intersection but the initial results augur well. It is believed that the true width may be in the order of 10 to 11 meters if the strike direction is other than the one tested.**
