GLOBEX OPTIONEE MAPLE GOLD REPORTS ASSAY RESULTS AT EAGLE MINE

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1MN – Frankfurt, Stuttgart, Berlin, Munich, Tradegate, Lang & Schwarz, LS Exchange, TTMzero, Düsseldorf and Quotrix Düsseldorf Stock Exchanges and GLBXF – OTCQX International in the US) is pleased to report that Maple Gold Mines Ltd. (TSX-V: MGM) (OTCQB: MGMLF) (FSE: M3G) has provided results from the final 20% of assays that were received from the previously completed 14,720 metres ("m") of drilling at the Eagle Mine Property ("Eagle") **under option from Globex Mining Enterprises Inc.** ([See today's Maple press release](#)).

The final batch of assays received from drilling completed at Eagle corresponds to approximately 3,000 m of the 14,720 m drilled to-date. **The results continue to demonstrate continuity of mineralization and the potential significance of the multiple horizons/splays to the northwest of the former Eagle mine.**

Highlights include:

- EM-22-008W intersected 6.2 grams per tonne ("g/t") gold ("Au") over 2.0 m in the South Mine Horizon ("SMH") and 4.2 g/t Au over 3.9 m in sediments further downhole.
- EM-22-006W1 intersected multiple intercepts including 6.5 g/t Au over 1.2 m and 2.0 g/t Au over 3.0 m in the SMH and 2.3 g/t Au over 3.0 m at the microgabbro/Harricana sediment contact further downhole.
- EM-22-006W4 intersected 4.0 g/t Au over 0.7 m within a broader 1.1 g/t Au over 14.2 m intercept within the SMH.
- EM-22-017A intersected 2.9 g/t Au over 2.0 m and additional lower grade over broader near-surface intervals (1.0 g/t Au over 15.5 m from 93 m downhole).

Overview Summary and Key Takeaways from Drilling at Eagle

The Eagle-Telbel Mine trend produced 1.1 M oz. at 6.5 g/t Au from 1974 – 1993, during a period when the price of gold averaged approximately \$350 per ounce.

The Company's drilling to-date at Eagle has served to confirm that gold mineralization is not limited to a narrow stratigraphic interval (Eagle-Telbel Mine Horizon) but instead covers a significantly broader stratigraphic interval of over 100 m straddling the Harricana Deformation Zone. Drill core observations also support the Company's concept of a significant structural component to gold mineralization in the form of an orogenic gold overprint.

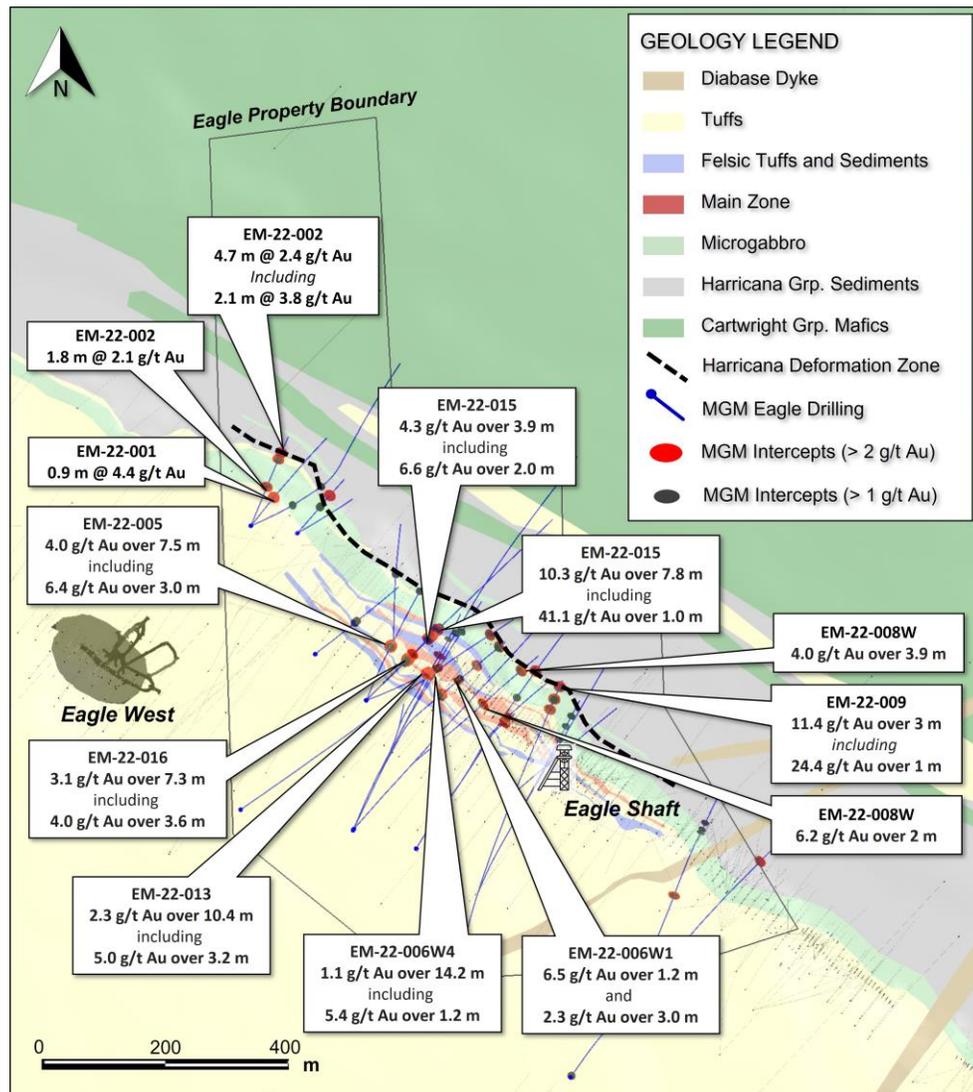

Figure 1: Plan view map showing drilling to-date at Eagle with highlighted intercepts.

Several highlights from the Company's first year of drilling at Eagle are summarized below (see Figure 1 above for locations):

- EM-22-005: 4.0 g/t Au over 7.5 m, including 6.4 g/t Au over 3.0 m
- EM-22-009: 11.4 g/t Au over 3 m, including 24.4 g/t Au over 1 m
- EM-22-013: 2.3 g/t Au over 10.4 m, including 5.0 g/t Au over 3.2 m
- EM-22-015: 10.3 g/t Au over 7.8 m, including 41.1 g/t Au over 1.0 m
- EM-22-015: 4.3 g/t Au over 3.9 m, including 7.4 g/t Au over 1.5 m
- EM-22-016: 3.1 g/t Au over 7.3 m, including 4.0 g/t Au over 3.6 m

When combining the Company's drilling results and observations with notable historical results and new geophysical data, several priority target areas emerge along the SMH and North Mine Horizon ("NMH"); including multiple cross-plunging target concepts that will form part of the focus for the Company's next phase of drilling (~5,000 m). The Company has initiated target definition and permitting work for a planned summer 2023 follow-up program at Eagle ([see press release March 16, 2023](#)).
