## More Positive Results from Exploration on Globex’s Lac Escale (Mirage) Property

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1MN – Frankfurt, Stuttgart, Berlin, Munich, Tradegate, Lang & Schwarz, LS Exchange, TTMzero, Düsseldorf and Quotrix Düsseldorf Stock Exchanges and GLBXF – OTCQX International in the US) is pleased to inform shareholders that Brunswick Exploration Inc. (BRW-TSXV) have **begun a minimum 5,000 metre drill program** on the Lac Escale (Mirage) property **under option from Globex. The 26-hole drill program will test continuity and widths of the six widest spodumene bearing pegmatite dykes that have been discovered to date on the property over a cumulative strike length of 2,500 metres.** Previously Brunswick indicated that these dykes outcropped in widths of up to 80 metres. Prospecting has also identified additional spodumene-bearing outcrops approximately 4.5 km northeast of the center of the previously defined dyke field. The trend of the mineralized dykes now extends for about 6 kilometres with the boulder field extending for an additional 2.7 kilometres to the southwest. Both the extent of the outcrops and boulder train remain open in all directions.

The main dyke field now covers an area measuring approximately 2,700 by 850 metres. In addition, other spodumene-mineralized pegmatite boulders have been found nearly 2 kilometres west of the main boulder train suggesting additional sources exist further to the west. In total, lithium mineralization on the project has been observed over a total distance of 8.7 kilometres.

Globex is pleased with the rapid progress by Brunswick on Globex’s property and looks forward to additional positive results as the exploration program unfolds ([click to Brunswick’s press release of September 7, 2023](#)).
