## Globex Aeromagnetic Survey Locates Priority Ilmenite Target

Rouyn-Noranda, Québec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1MN – Frankfurt, Stuttgart, Berlin, Munich, Tradegate, Lang & Schwarz Stock Exchanges and GLBXF – OTCQX International) is pleased to inform shareholders that we have completed a high resolution helicopter borne magnetic survey on our 100% owned Ontario Lake property in Côte-de-Beaupré Township, Quebec, approximately 90 km NE of Quebec City.

The survey by Novatem Airborne Geophysics covered the entire Ontario Lake property with the objective of locating areas of higher magnetic signatures which may be reflective of the concentration of ilmenite, an ore of titanium dioxide which is used in paints, fabrics, plastics, paper, sunscreen, toothpaste as well as certain foods and cosmetics. Previously, Globex had located a 15 m by 7 m outcrop of massive ilmenite and reported high grade channel samples from the outcrop in a press release dated December 11, 2013 as follows:

Sample #	From (m)	To (m)	Width (m)	Fe <sub>2</sub> O <sub>3</sub> %	TiO <sub>2</sub> %	V <sub>2</sub> O <sub>5</sub> %	Comments
68951	0	1	1	41.98	27.95	0.16	
68952	1	2	1	53.94	36.20	0.20	
68953	2	3	1	57.98	38.84	0.22	
68954	3	4	1	58.20	39.51	0.22	
68955	4	5	1	59.81	39.81	0.22	
68956	5	6	1	60.09	40.17	0.22	
68957	6	6	0.7	59.63	39.90	0.22	Vertical Face sample
68958	6	6.7	0.7	58.75	41.16	0.22	
68959	6.7	6.7	1	59.36	39.71	0.22	Vertical Face sample

The outcrop of massive ilmenite is located northeast of the large magnetic anomaly located in the current survey and represents a separate magnetic structure.

Previous exploration had located a large amount of ilmenite bearing glacial debris adjoining the southern boundary of our property (see maps on Globex website, “Ontario Lake Property”, for details). The new airborne magnetic survey located a large magnetic anomaly (approx 1200 m x 1000 m) directly north of this glacial debris, which may represent the source of the ilmenite glacial fragments. Ilmenite, the ore mineral being sought, is not magnetic but in samples collected from the massive ilmenite showing displays mild magnetism probably from magnetite associated with the ilmenite.

Considering the strength and location of the magnetic anomaly, in relation to the nearby glacially transported ilmenite fragments, Globex plans to undertake a detailed program of prospecting and mapping in the area of the magnetic anomaly and will, based upon the program results, undertake stripping and/or diamond drilling in priority areas.

This press release was written by Jack Stoch, P. Geo., President and CEO of Globex in his capacity as a Qualified Person (Q.P.) under NI 43-101.

We Seek Safe Harbour.
